

S2

SEARCH & RESCUE

THE MOST VERSATILE AND RUGGED
FIRE FIGHTING THERMAL
IMAGING CAMERA AVAILABLE TODAY
CAPABLE OF MAN OVERBOARD DETECTION

Our cutting-edge technology brings you the smallest long range imager available today.

The unit using our lightest and smallest, long wavelength infrared camera core which will give man detection at 1000 metres and larger object identification over several kilometres.

The S2 can be used as a hands-free unit or it can be hung over the neck like a pair of binoculars using the neck strap and is the lightest and smallest thermal imager in the World.

The S2 Search & Rescue is ideal for any situation from surveillance and vessel security to 'man overboard'. It can easily identify objects over long ranges through darkness, fog, smoke, or direct bright blinding spotlights. The many benefits of the S2 Search & Rescue is that it allows rescue services to move efficiently no matter the conditions faced, from Crash Teams and Marine Rescuers moving quickly to crash and accident sites, through to vessel crew for man over board to vessel identification. As an all round camera with the capability to monitor for 'man overboard', give vessel security and identify objects over long ranges it is second to none.

S2

S2 Search & Rescue - Option 1

- On Screen Battery Time Remaining
- On Screen Temperature Warnings
- Incremental Zoom - 1X, 2X, 3X
- Video Output
- On Screen Graticules for Distance Recognition
- Over 3 Hours Battery Life (With Rechargeable Battery)

S2 PLUS

S2 Search & Rescue Plus Standard - Option 2

- Same as the "Base" Imager PLUS:
- Menu System To Select Mission Specific Options
- One Second Temperature Sampling Profile storage (10,000 hours)
- Stores Historical and Mission Statistics (8,000 Missions)
- Standard Imager Analyst® software for retrieving and displaying data

S2 PLUS PRO

S2 Search & Rescue Plus Pro - Option 3

- Same as the "Base" and "Standard" Imagers PLUS:
- One Second Internal Temperature Sampling Profile
- Colour Map Scroll During a Mission to enhance detail
- Automatic Image Capture (Adjustable 1 to 60 seconds interval)
- Manual Push-Button Image Capture
- Pro Imager Analyst® software for retrieving and displaying data
- Internally Stores 40,000 Images.
- Colour Map creation and customization
- Customized start up screen
